Why it all started . . . (Grün and Zeileis 2009)

- *Scalable exams*: Automatic generation of a large number of different exams in order to provide an individual test to each student.
- *Associated self-study materials*: Collections of exercises and solutions from the same pool of examples.
- *Joint development*: Development and maintenance of a large pool of exercises in a multi-author and cross-platform setting.

—→ abstract task format . . .

... with many export possibilities (Zeileis, Umlauf, and Leisch 2014)

Task Format

- first version: \LaTeX -based variant in the form of so-called Sweave files (ending mostly *Rnw* originally **Rnoweb**)
 - *R*-code linked to \LaTeX -commands
 - in practice: during the *R* program's runtime, the selected *R* outputs are combined with the \LaTeX -commands to form a \LaTeX -file

Task Format

- first version: \LaTeX -based variant in the form of so-called Sweave files (ending mostly *Rnw* originally **Rnoweb**)
 - *R*-code linked to \LaTeX -commands
 - in practice: during the *R* program's runtime, the selected *R* outputs are combined with the \LaTeX -commands to form a \LaTeX -file

- later versions: additionally a *markdown*-based variant in the form of so-called *R markdown*-files (suffix *Rmd* stands for **R markdown**)
 - Markdown code is created during the runtime of the *R* program

Concrete

Illustrative example – pdf

1. **Problem**

Which number is larger: $\frac{4}{9}$ or $\frac{2}{7}$?

- (a) $\frac{4}{9}$ is larger
- (b) $\frac{2}{7}$ is larger
- (c) equally large

Solution

$\frac{4}{9}$ is larger since $4 \cdot 7 = 28 > 18 = 9 \cdot 2$.

Illustrative example – docx

1. **Question**

Which number is larger: $\frac{4}{9}$ or $\frac{2}{7}$?

(a) $\frac{4}{9}$ is larger

(b) $\frac{2}{7}$ is larger

(c) equally large

Solution

$\frac{4}{9}$ is larger since $4 \cdot 7 = 28 > 18 = 9 \cdot 2$.

Illustrative example – html

Exam 1

1. Question

Which number is larger: $\frac{4}{9}$ or $\frac{2}{7}$?

- a. $\frac{4}{9}$ is larger
- b. $\frac{2}{7}$ is larger
- c. equally large

Solution

$\frac{4}{9}$ is larger since $4 \cdot 7 = 28 > 18 = 9 \cdot 2$.

Illustrative example – randomization

```
```{r,echo=FALSE}
DATA GENERATION
z <- c(4,9,2,7)
x = z[[1]]/z[[2]]; y = z[[3]]/z[[4]]
zahl1=paste0("$\\frac{" ,z[1] ,"{" ,z[2] ,"}$");zahl2=paste0("$\\frac{" ,z[3] ,"{" ,z[4] ,"}$")
TXT= paste0("Which number is larger: ",zahl1," or ", zahl2," ?")
questions= c(paste0(zahl1," is larger"),paste0(zahl2," is larger"),"Equally large")
solutions=c(x>y,x<y,x==y)
explanation=paste0(questions[solutions]," since $",z[1] ,"\\cdot",z[4] ,"=" ,z[1]*z[4] ,
c(">","<","=")[solutions],z[2]*z[3] ,"=" ,z[2] ,"\\cdot",z[3] ,"$ ist.")
```

Question
=====
`r TXT`
```{r, echo=FALSE,results="asis"}
answerlist(questions,markup="markdown")
```

Solution
=====
`r explanation`

META-INFORMATION
=====
extype: schoice
exsolution: `r mchoice2string(solutions)`
exname: size
```

Illustrative example – randomization

```
```{r,echo=FALSE}
DATA GENERATION
z <- sample(1:20,4,replace=TRUE)
x = z[[1]]/z[[2]];y = z[[3]]/z[[4]]
zahl1=paste0("$\\frac{" ,z[1] ,"{" ,z[2] ,"}$");zahl2=paste0("$\\frac{" ,z[3] ,"{" ,z[4] ,"}$")
TXT= paste0("Which number is larger: ",zahl1," or ", zahl2," ?")
questions= c(paste0(zahl1," is larger"),paste0(zahl2," is larger"),"Equally large")
solutions=c(x>y,x<y,x==y)
explanation=paste0(questions[solutions]," since $",z[1] ,"\\cdot",z[4] ,"=",z[1]*z[4] ,
c(">","<","=")[solutions],z[2]*z[3] ,"=",z[2] ,"\\cdot",z[3] ,"$ ist.")
```

Question
=====
`r TXT`
```{r, echo=FALSE,results="asis"}
answerlist(questions,markup="markdown")
```

Solution
=====

Task formats (extype)

- num
- schoice/mchoice
- string
- cloze (→ exclozetype)

Task formats (extype)

- num: exsolution number (possibly extol)
- schoice/mchoice: exsolution 00010 (mchoice2string)
- string: exsolution string
- cloze (\longrightarrow exclozetype): exsolution `exs|exs|. . . |`

Create tasks – exams2xyz

$xyz \in \{pdf, html, pandoc, openolat, arsnova, moodle\} \cup \{dimma\}$

Examples

```
require(exams)
exams2html("illustrativeExample.Rmd")
exams2pdf("illustrativeExample.Rmd", encoding = "utf8")
exams2pandoc("illustrativeExample.Rmd", encoding = "utf8") (default
setting is docx)
```

WebApp

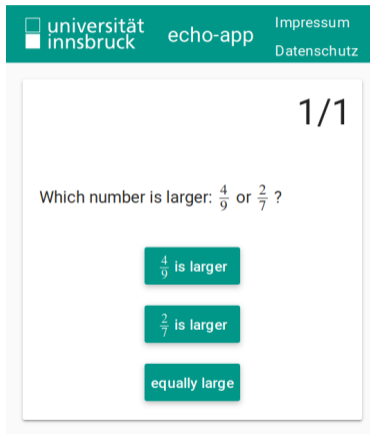

Input

- *exams* tasks

Output

- Data frame (correctness, response time, given answer, ...)

Illustrative example – WebApp

The screenshot shows a web application interface with a teal header. On the left, it features the logo of the University of Innsbruck and the text 'universität innsbruck'. In the center of the header is 'echo-app', and on the right are the links 'Impressum' and 'Datenschutz'. The main content area is white and contains a question: 'Which number is larger: $\frac{4}{9}$ or $\frac{2}{7}$?'. In the top right corner of the content area, the score '1/1' is displayed. Below the question are three teal buttons with white text: the top button says ' $\frac{4}{9}$ is larger', the middle button says ' $\frac{2}{7}$ is larger', and the bottom button says 'equally large'.

universität innsbruck echo-app Impressum Datenschutz

1/1

Which number is larger: $\frac{4}{9}$ or $\frac{2}{7}$?

$\frac{4}{9}$ is larger

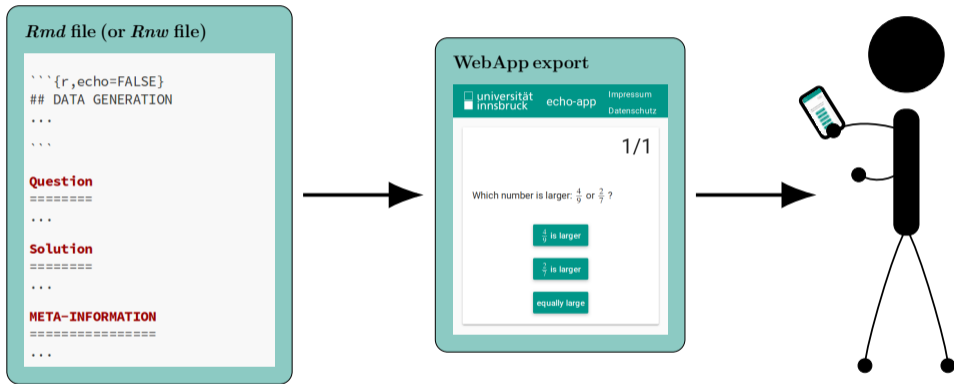

$\frac{2}{7}$ is larger

equally large

WebApp: echo-app.org

Dummy-Code: SHMONV

Summary Workflow

What comes next ...

Natural number biased?

A technology-aided identification of profiles with respect to rational numbers understanding.

Florian Stampfer

What is the *Natural Number Bias* ?

How many numbers lie between 1.9 and 1.40?

Order these numbers: $\frac{5}{6}$, 1, $\frac{1}{4}$, $\frac{4}{3}$.

Which number is missing:
 $0.36 - 0.2 = \dots?$

Write down a number between $\frac{1}{4}$ and $\frac{3}{4}$.

Which number is larger:
4.4 and 4.50?

Do you think that $50 \cdot \frac{3}{2}$ is more or less than 50?

What is the *Natural Number Bias* ?

How many numbers lie between 1.9 and 1.40?

Order these numbers: $\frac{5}{6}$, 1, $\frac{1}{4}$, $\frac{4}{3}$.

Which number is missing:
 $0.36 - 0.2 = \dots?$

incongruent

Write down a number between $\frac{1}{4}$ and $\frac{3}{4}$.

Which number is larger: 4.4 and 4.50?

Do you think that $50 \cdot \frac{3}{2}$ is more or less than 50?

congruent

What is the *Natural Number Bias* ?

How many numbers lie between 1.9 and 1.40?

Write down a number between $\frac{1}{4}$ and $\frac{3}{4}$.

density

Order these numbers: $\frac{5}{6}$, 1, $\frac{1}{4}$, $\frac{4}{3}$.

Which number is larger: 4.4 and 4.50?

size

Which number is missing:
 $0.36 - 0.2 = \dots?$

Do you think that $50 \cdot \frac{3}{2}$ is more or less than 50?

operations

Natural Number Bias

The whole number bias thus refers to a robust tendency to use the single-unit counting scheme to interpret instructional data on fractions.

Ni and Zhou (2005), p, 28

The natural number bias is described as the (inappropriate) application of natural number features in rational number tasks.

Van Hoof, Verschaffel, and Van Dooren (2015), p. 40

Study 1: Western Austria

Study population

- 318 pre-service primary teachers (286 female) of two academic years
- Western Austria (Tyrol and Vorarlberg): Three colleges for teacher education (Pädagogische Hochschulen)
- Before any course on rational numbers
- Conducted in spring 2017 from March to June

Test items

- Rational Number Sense Test: 83 items
- Aspects: 15 *density*, 45 *size*, 23 *operations*
- Congruency: 24 *congruent* and 59 *incongruent* items
- 5 items on demographic data (gender, secondary school types (2), country of graduation, math grade)

Results of the study in Western Austria (1)

- accuracies and response times: clustering mixed-type data

Results of the study in Western Austria (1)

- accuracies and response times: clustering mixed-type data

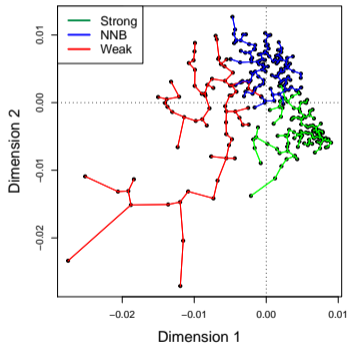

| | | | |
|---------------|--------|-----|------|
| group | Strong | NNB | Weak |
| number | 122 | 125 | 71 |

Results of the study in Western Austria (1)

- accuracies and response times: clustering mixed-type data
- dimension reduction: 83 binary variables to 2 dimensions using homogeneity analysis

Results of the study in Western Austria (1)

- accuracies and response times: clustering mixed-type data
- dimension reduction: 83 binary variables to 2 dimensions using homogeneity analysis

- Dimension 1 \approx Accuracy
- Dimension 2 \approx NNB

Results of the study in Western Austria (2)

Study 2: University of Potsdam

- Survey (pre/post) by means of WebApp of the students in the teacher training course Mathematics for the Primary School at the University of Potsdam
- Pre-Test: Question set with 83 exercises on the three aspects *density*, *size*, *operations* in the variants congruent and incongruent ; some demographic data; Code for Sample Pairing: 47 (**14**)
- Post-Test: Question set with 46 exercises on the three aspects *density*, *size*, *operations* in the variants congruent and incongruent ; FEMOLA 1¹ with 33 items; Code for sample pairing: 20 (**14**)

¹Questionnaire for recording the motivation for the choice of teacher training

Results from Potsdam (M1)

| group | Strong | NNB | Weak |
|---------------|--------|-----|------|
| number | 24 | 19 | 4 |

Results from Potsdam (M1)

| group | Strong | NNB | Weak |
|---------------|--------|-----|------|
| number | 12 | 2 | 0 |

Results from Potsdam (M1+2)

| | Strong (M2) | NNB (M2) | Weak (M2) |
|--------------------|-------------|----------|-----------|
| Strong (M1) | 12 | 0 | 0 |
| NNB (M1) | 2 | 0 | 0 |
| Weak (M1) | 0 | 0 | 0 |

Results from the talk at the T³ Sharing Inspiration

Results from the talk at the T³ Sharing Inspiration

| group | Strong | NNB | Weak |
|--------|--------|-----|------|
| number | 2 | 0 | 0 |

Discussion

- students in Western Austria show tendencies for NNB
- (also) students in Potsdam show tendencies for NNB
- T³ Sharing Inspiration participants show tendencies for NNB !?!

Outlook

- valuable element of the course (orientation for students and lecturer) → adapt lecture
- near future: profile-dependent learning opportunities in technical education
- far future: . . .
